

April 7th

“COVID-19 had a serious adverse impact on the T&M instruments supply chain to our GW Instek factory in Taiwan, and our production facility in China during February. GW Instek Taiwan labor was not impacted much due to Taiwan’s management to contain the spread of COVID-19. The shortages we experienced are from the delay in components and raw materials from China. Now that China has improved containment of the virus, production is getting back on track now except for certain specific product lines.

If you need better lead-times for your urgent project, please feel free to reach out us for further assistance.

Let me know whether you need further input. Have a great day! “

Regarding the impact of COVID-19 COVID-19

COVID-19 had a serious adverse impact on the T&M instruments supply chain to our GW Instek factory in Taiwan, and our production facility in China during February. GW Instek Taiwan labor was not impacted much due to Taiwan’s management to contain the spread of COVID-19. The shortages we experienced are from the delay in components and raw materials from China. Now that China has improved containment of the virus, production is getting back on track now except for certain specific product lines.

If you need better lead-times for your urgent project, please feel free to reach out us for further assistance.

Let me know whether you need further input. Have a great day!
